Acknowledgments

The air monitoring associated with Fox River PCB remediation efforts was funded by the Fox River Group (FRG), and conducted by Wisconsin Department of Natural Resources personnel following monitoring plans developed by Blasland, Bouck and Lee, Inc for the FRG. The general design of the project was developed with the help and cooperation of the Fox River Remediation Advisory Team.

Many thanks to those citizens, businesses and the Oneida Nation who graciously provided space and power for the monitoring stations. Table O-1 in the Project Overview section contains a list of sampler locations. Without their cooperation, there could have been no monitoring.

Thanks are due as well to the personnel of the State Laboratory of Hygiene Organics Section, who, in addition to performing quality analysis in a timely manner, provided preliminary results which helped define sampling parameters. This feedback helped ensure that this sampling program maintained a high quality standard.

Emission modeling support was provided by John Roth, DNR Air Management. Help with emission calculations was provided by Dr. Jamie Schauer, UW Madison. Spatial representations were developed by G. Fritz Statz, DNR Watershed Management.

While others contributed to the preparation of the report, any errors of omission or commission are the sole responsibility of the author.
